

Copyright, Data, and Tournament Ruleset

Last updated: 2026-07-03

Copyright Notice

Copyright (c) 2026 CCI Volunteer Legion and ATLNO.exe. All rights reserved unless a written license says otherwise.

This repository contains event website code, tournament presentation logic, documentation, and brand-integrated layout work for CCI Volunteer Legion Wars. The code and design system may not be copied, resold, republished, or reused for unrelated events without permission from the event owner.

Brand and Media Rules

- CCI Volunteer Legion marks, logos, page layout, visual styling, and event naming are event-controlled assets.
- The included logo file is used only for this event website.
- Do not replace the logo with third-party artwork unless that artwork is cleared for event use.
- Do not add sponsor, partner, or game publisher marks unless staff has permission.

Player Data Rules

The public website should expose only the minimum data needed for viewers to follow the bracket:

- Allowed: public display name, public-safe city/state/legion region, bracket seed, lobby, round, match, score, winner, and match state.
- Avoid: phone numbers, platform IDs, email addresses, payment data, private notes, check-in flags, staff-only dispute notes, and full registration lists.
- Do not consume Master Sheet, Player Details, or private Overview data.

Sheet Rules

The published workbook is the public source of truth for bracket state.

Group and Wildcard feeds use:

```
Stage, Lobby, Player 1, City, Rank, Qualified, Player 2, City, Rank, Qualified, ...
```

National Finals uses:

```
Round, Match, Player A, Score A, Player B, Score B, Winner
```

The current duplicate Score / Score National Finals headers are tolerated by the parser, but should be renamed to Score A / Score B.

Tournament Ruleset Boundary

Current production assumptions:

- Titan, Nexus, and Dominion are the three group brackets.
- Group brackets progress through lobby rounds.
- Top two from each lobby advance during group progression.
- Round Four is represented by Round of 8 in the current group sheets.
- Round Four has two lobbies per group.
- Top two from both Round Four lobbies become the group's top four direct National Finals qualifiers.
- Third/fourth from both Round Four lobbies become the group's 5th-8th placements and enter Wildcard.
- Wildcard produces four National Finals qualifiers.
- When the Wildcard tab has no public players yet, the website derives the 12-player Wildcard pool from the three group Round Four stages.
- National Finals contains 16 players: 12 direct group qualifiers and 4 Wildcard qualifiers.
- National Finals is single elimination.

Operational Rules

- Update the public workbook feeds during live operations.
- Do not publish private tabs as website feeds.
- Keep the public schema stable during the event.
- Use the website refresh control only when an immediate sync is needed.
- Redeploy only for code, config, schema, hosting, or ruleset changes.

Enforcement in Code

The runtime implementation enforces the ruleset by:

- Loading only configured public workbook gid feeds.
- Caching each feed locally to reduce repeated network requests.
- Using separate parser modes for group/lobby feeds and National Finals.
- Suppressing player names that start with sheet error markers such as #REF!.
- Normalizing Wildcart to Wildcard.
- Falling back to safe placeholder data if feeds are unavailable.
- Keeping Discord, broadcast, admin, and private registration flows outside the public website scope.

This is not a legal contract. It is the project ruleset that engineering and event staff should follow unless the event owner issues a stronger written policy.

PDF Artifact

A rendered PDF version is generated at:

```
output/pdf/cci-legion-wars-copyright-ruleset.pdf
```

Regenerate it after edits with:

```
npm run pdf:rules
